SOYEON KIM

BUSINESS ANALYST | STRATEGY, ANALYTICS & AI-ENABLED OPERATIONS

Seoul, South Korea · success_so@naver.com · +82 10-4349-5145

PROFILE

Business analyst combining global commerce consulting, fintech operations and applied AI. I identify recurring business bottlenecks, structure competing hypotheses and translate data and technology into practical workflows—from AI-assisted Excel reporting to RPA requirements and generative-AI evaluation.

PROFESSIONAL EXPERIENCE

EY Hanyoung (Ernst & Young) — Business Analyst, Consulting | Aug 26, 2026 – Present

- Global search diagnostics: To distinguish genuine customer friction from traffic or ranking artifacts, analyzed country-level LG.com search metrics, top queries, search-result relevance and no-result events; translated competing hypotheses into focused investigations and monthly client narratives.
- Hypothesis-led experiments: When model/size/color queries returned partially matching products, traced exact-match failures to ranking signals and promotional boosts; compared results before and after factor changes and supported UK/Spain A/B testing with CTR and relevance checks.
- AI-assisted reporting automation: Recognized that monthly country-level search reporting required repetitive raw-data preparation and slide/report updates; used Claude and ChatGPT to develop a reusable Excel dashboard and reporting workflow that produces updated analyses and reporting materials when new raw data is loaded.
- Recommendation design: Compared Samsung, Amazon, Apple, Best Buy and MediaMarkt discovery journeys, then translated observed gaps into search refinement, intent-aware discovery and guided-shopping proposals with AS-IS/TO-BE artifacts.
- Product discovery requirements: Helped structure intent-based Product/Accessories/Support navigation and bidirectional main-product/accessory compatibility; articulated rules and country exceptions for alignment with product, design, engineering and search-vendor teams.

KakaoPay — Insurance Clan, Insurance Hub Party | Business Operations Intern | Sep 2025 – Apr 2026

- Customer diagnosis: To address campaign inefficiency rather than simply increase send volume, segmented users by lifecycle stage and insurance-ownership context; analyzed funnel behavior and channel results with SQL, Grafana, Power BI and Excel to identify actionable differences.
- Test-and-learn optimization: Converted segment insights into message, offer, send-time and channel hypotheses; ran iterative copy/targeting adjustments, tracked CTR/CVR and refined delivery based on performance rather than intuition.
- Measured outcomes: Increased campaign CTR from 1.6% to 3.9% and CVR from 0.12% to 0.18%, contributing to above-target KPI delivery; used recurring variance reviews to prioritize the next set of experiments.
- RPA requirements and delivery collaboration: Identified daily SQL-based extraction of eligible messaging audiences as a recurring manual task; mapped the extraction workflow and authored functional requirements for an RPA bot, partnering with the dedicated RPA team to support automation of the process.
- Stakeholder alignment: Reconciled marketing growth priorities with operational constraints by presenting KPI evidence, trade-offs and practical execution plans to collaborating teams.

ABLY — AI Operations / Service Planning Intern | Jul 2026 – Aug 2026

- Generative AI evaluation: Explored Higgsfield and Seedance video-generation workflows for commerce content, comparing outputs for quality, mood fit and production practicality instead of treating model capability as sufficient for deployment.
- Evaluation-to-operations: Structured repeatable Rookie Pass/Fail and mood-assessment criteria, reviewed failure modes and iterated prompts/workflows to support more consistent content production and selection.
- Scalability: Contributed to deploying AI-assisted approaches across approximately 30 commerce use cases, connecting model tests to operational processes and business use.

LEADERSHIP & SELECTED PROJECTS

Korea University College of Health Sciences — Student Council President | Dec 2022 – Mar 2024

- Represented ~2,000 students and managed ~KRW 70M annual budget; redesigned organizational roles and reporting flows in response to coordination bottlenecks, balancing delivery timelines and diverse stakeholder needs across campus-wide events.
- Implemented a flatter team structure and clearer accountability, helping accelerate reporting and achieve 98% pledge fulfillment.

NAVER AI RUSH — HyperCLOVA X Healthcare Chatbot Project | 2023

- Chose Korean-language-specialized HyperCLOVA X to better handle nuanced Korean symptom descriptions; structured 200+ medical reference items and designed an intake-to-care-recommendation dialogue, iterating prompts and user scenarios with developers. Recognized as a Best Practice project.

PRIMED — Sponsorship Strategy Team Leader | May 2021 – Sep 2022

- Mapped prospective corporate partners to CSR priorities, refined sponsorship pitches after feedback and secured three partnerships; helped deliver crowdfunding at 130% of target.

EDUCATION & SKILLS

Korea University — B.A. Health Policy & Management; Double Major in Economics | Graduated Aug 2026

Data & tools: SQL · Excel (SUMIFS, pivots) · Claude · ChatGPT · Higgsfield · Seedance · Power BI · Grafana · Python · Stata · PowerPoint | Methods: KPI analysis, A/B testing, RPA requirements, AI-assisted reporting, model evaluation | Languages: Korean (native), English (OPIc IH)
